

Installation instructions

FENCE PROFILE DIVIDER

DESCRIPTION

Profile divider protects against damage to the layer of zinc or paint on profiles and cold-formed sections. Protects against damage to surfaces (e.g. polished or ground stainless steel profiles). It comes in different configurations. It is possible to make dividers for different sections*.

STORAGE

Store in a dry place in the original packaging (cardboard box). Dividers must be arranged when stored (otherwise may be deformed with time). Storage temperature up to 40°C.

ASSEMBLY

The dividers separate the profiles in all directions, preventing the walls from coming into contact with each other and causing corrosion. They enable forming bundles. Enables very good ventilation of the bundle (quick moisture removal). Depending on the length of the profiles, they should be used at the two ends of the bundle (or more densely).

NOTES

Adhere to OHS rules and the manufacturer's guidelines during assembly.
